

EATING WELL DURING CANCER TREATMENT

Nutrition is an important part of cancer treatment. Eating the right kinds of foods before, during and after treatment can help patients feel better and stay stronger. To ensure proper nutrition, a person has to eat and drink enough of the foods that contain key nutrients such as protein, carbohydrates, fat, vitamins, minerals and water. The table below provides guidelines on choices of food in its food groups that may help in planning meals during cancer treatment.

Note:

To Be Encouraged – may be consumed daily

In Moderation – may be included in meal plan twice weekly

Not Recommended – should not be included in meal plan during cancer treatment due to risk of food contamination and/or known carcinogen
